

Logarithmic inequalities

REMEMBER: For $\log_a b = x \Leftrightarrow b = a^x$, ($a > 0, a \neq 0$) is

- 1) When is the basis greater than 1 ($a > 1$) sign of inequality remains the same
- 2) When is the basis between 0 and 1 ($0 < a < 1$), rotate the sign of inequality

1) Solve the inequalities:

a) $\log_2(3x+4) \geq 0$

b) $\log_{\frac{1}{2}}(4x-3) < 0$

c) $\log_2(3x-5) < 1$

Solution:

a)

$$\log_2(3x+4) \geq 0 \quad \text{condition: } 3x+4 > 0$$

$$3x+4 \geq 2^0 \quad 3x > -4$$

$$3x+4 \geq 1 \quad x > -\frac{4}{3}$$

$$3x \geq -3$$

$$x \geq -1$$

Now, observe solution and the condition:

Finally: $x \in [-1, \infty)$

b)

$$\log_{\frac{1}{2}}(4x-3) < 0 \quad \text{condition: } 4x-3 > 0$$

$$4x > 3$$

$$4x-3 > \left(\frac{1}{2}\right)^0 \quad x > \frac{3}{4}$$

$$4x-3 > 1$$

$$4x > 4$$

$$x > 1$$

observe solution and the condition :

Solution: $x \in (1, \infty)$

c)

$$\begin{aligned} \log_2(3x-5) < 1 & \quad \text{condition: } 3x-5 > 0 \\ 3x-5 < 2^1 & \quad 3x > 5 \\ 3x-5 < 2 & \quad 3x > 7 \\ 3x < 7 & \quad x > \frac{5}{3} \\ x < \frac{7}{3} & \end{aligned}$$

$$x \in \left(\frac{5}{3}, \frac{7}{3} \right)$$

2) Solve the inequalities:

- a) $\log(x-2) > \log x$
 b) $\log_{0,5}(2x+6) > \log_{0,5}(x+8)$

Solution:

a)

$$\begin{aligned} \log(x-2) > \log x & \quad \text{condition: } x-2 > 0 \text{ and } x > 0 \\ x-2 > x & \quad x > 2 \text{ and } x > 0 \\ x-x > 2 & \quad \text{So: } x > 2 \\ 0x > 2 & \end{aligned}$$

This has no solutions, and the whole inequalities has no solutions!

b)

$$\log_{0,5}(2x+6) > \log_{0,5}(x+8)$$

$$\begin{aligned} 2x+6 < x+8 & \quad 2x+6 > 0 \wedge x+8 > 0 \\ 2x-x < 8-6 & \quad x > -3 \wedge x > -4 \longrightarrow x > -3 \\ x < 2 & \end{aligned}$$

together:

$$x \in (-3, 2) \text{ final solution}$$

3) Solve the inequalities:

a) $\log_3(x^2 - 5x + 6) < 0$

b) $\log_{0,5}(x^2 - 4x + 3) \geq -3$

Solution:

a)

$$\log_3(x^2 - 5x + 6) < 0$$

$$x^2 - 5x + 6 < 3^0$$

$$x^2 - 5x + 6 < 1$$

$$x^2 - 5x + 5 < 0$$

$$x_{1,2} = \frac{5 \pm \sqrt{5}}{2}$$

$$x_1 = \frac{5 + \sqrt{5}}{2} \approx 3,62$$

$$x_2 = \frac{5 - \sqrt{5}}{2} \approx 1,38$$

$$x^2 - 5x + 6 > 0$$

$$x_{1,2} = \frac{5 \pm 1}{2}$$

$$x_1 = 3$$

$$x_2 = 2$$

$$\begin{array}{ccccccc} & + & & - & & + & \\ -\infty & & 2 & & 3 & & \infty \end{array}$$

$$x \in (-\infty, 2) \cup (3, \infty)$$

$$\begin{array}{ccccccc} & + & & - & & + & \\ -\infty & & \frac{5 - \sqrt{5}}{2} & & \frac{5 + \sqrt{5}}{2} & & \infty \end{array} \longrightarrow x \in \left(\frac{5 - \sqrt{5}}{2}, \frac{5 + \sqrt{5}}{2} \right)$$

$$x \in \left(\frac{5 - \sqrt{5}}{2}, 2 \right) \cup \left(3, \frac{5 + \sqrt{5}}{2} \right) \text{ Is final solution}$$

b)

$$\log_{0,5}(x^2 - 4x + 3) \geq -3$$

$$x^2 - 4x + 3 \leq (0,5)^2$$

$$x^2 - 4x + 3 \leq \left(\frac{1}{2}\right)^{-3}$$

$$x^2 - 4x + 3 \leq 2^3$$

$$x^2 - 4x + 3 \leq 8$$

$$x^2 - 4x + 3 - 8 \leq 0$$

$$x^2 - 4x - 5 \leq 0$$

$$x_{1,2} = \frac{4 \pm 6}{2}$$

$$x_1 = 5$$

$$x_2 = -1$$

$$x \in [-1, 5]$$

$$\text{condition: } x^2 - 4x + 3 > 0$$

$$x_{1,2} = \frac{4 \pm 2}{2}$$

$$x_1 = 3$$

$$x_2 = 1$$

together:

$$\text{Finally: } x \in [-1, 1) \cup (3, 5]$$
